

# Setting the Standard in Responsible Manufacturing

Here's How We're Working Toward a More Sustainable Future

## We all have a part to play in protecting our planet.

That's why at CDI Products, we're adopting ambitious goals for long-term sustainability in product manufacturing, including **reducing our overall environmental impact by 30% by 2030.**

From reducing CO<sub>2</sub> emissions and hazardous waste to improving our recycling efforts, we've made a lot of progress over the past decade. But it's no time to relax. We continue to innovate new ways to reduce, reuse, recycle, and most importantly, *rethink* what it means to be a sustainable manufacturer.

## Recycle

We separate the byproducts of our manufacturing process and work with vendors to reduce landfill waste. **Over the past 10 years, we've recycled more than 93 tons of plastic shavings.**

OUR VISION:  
**By 2030**  
Become a  
Zero Landfill  
Manufacturer

## Reduce

We've diligently worked to identify and replace solvents at our Houston factory with earth-friendly chemicals and reduced metal waste by 20 tons. **The facility is now 100% powered by renewable energy.**

OUR VISION:  
**By 2030**  
Reduce  
Solvent  
Consumption  
by 50%

## Reuse

Many of our manufacturing byproducts are repurposed into new products. For example, valve stems in our molding process are reground and reused, while **rubber byproducts can see new life as playground mulch.**

OUR VISION:  
**By 2030**  
Slash Energy  
and Water  
Consumption  
by 30%

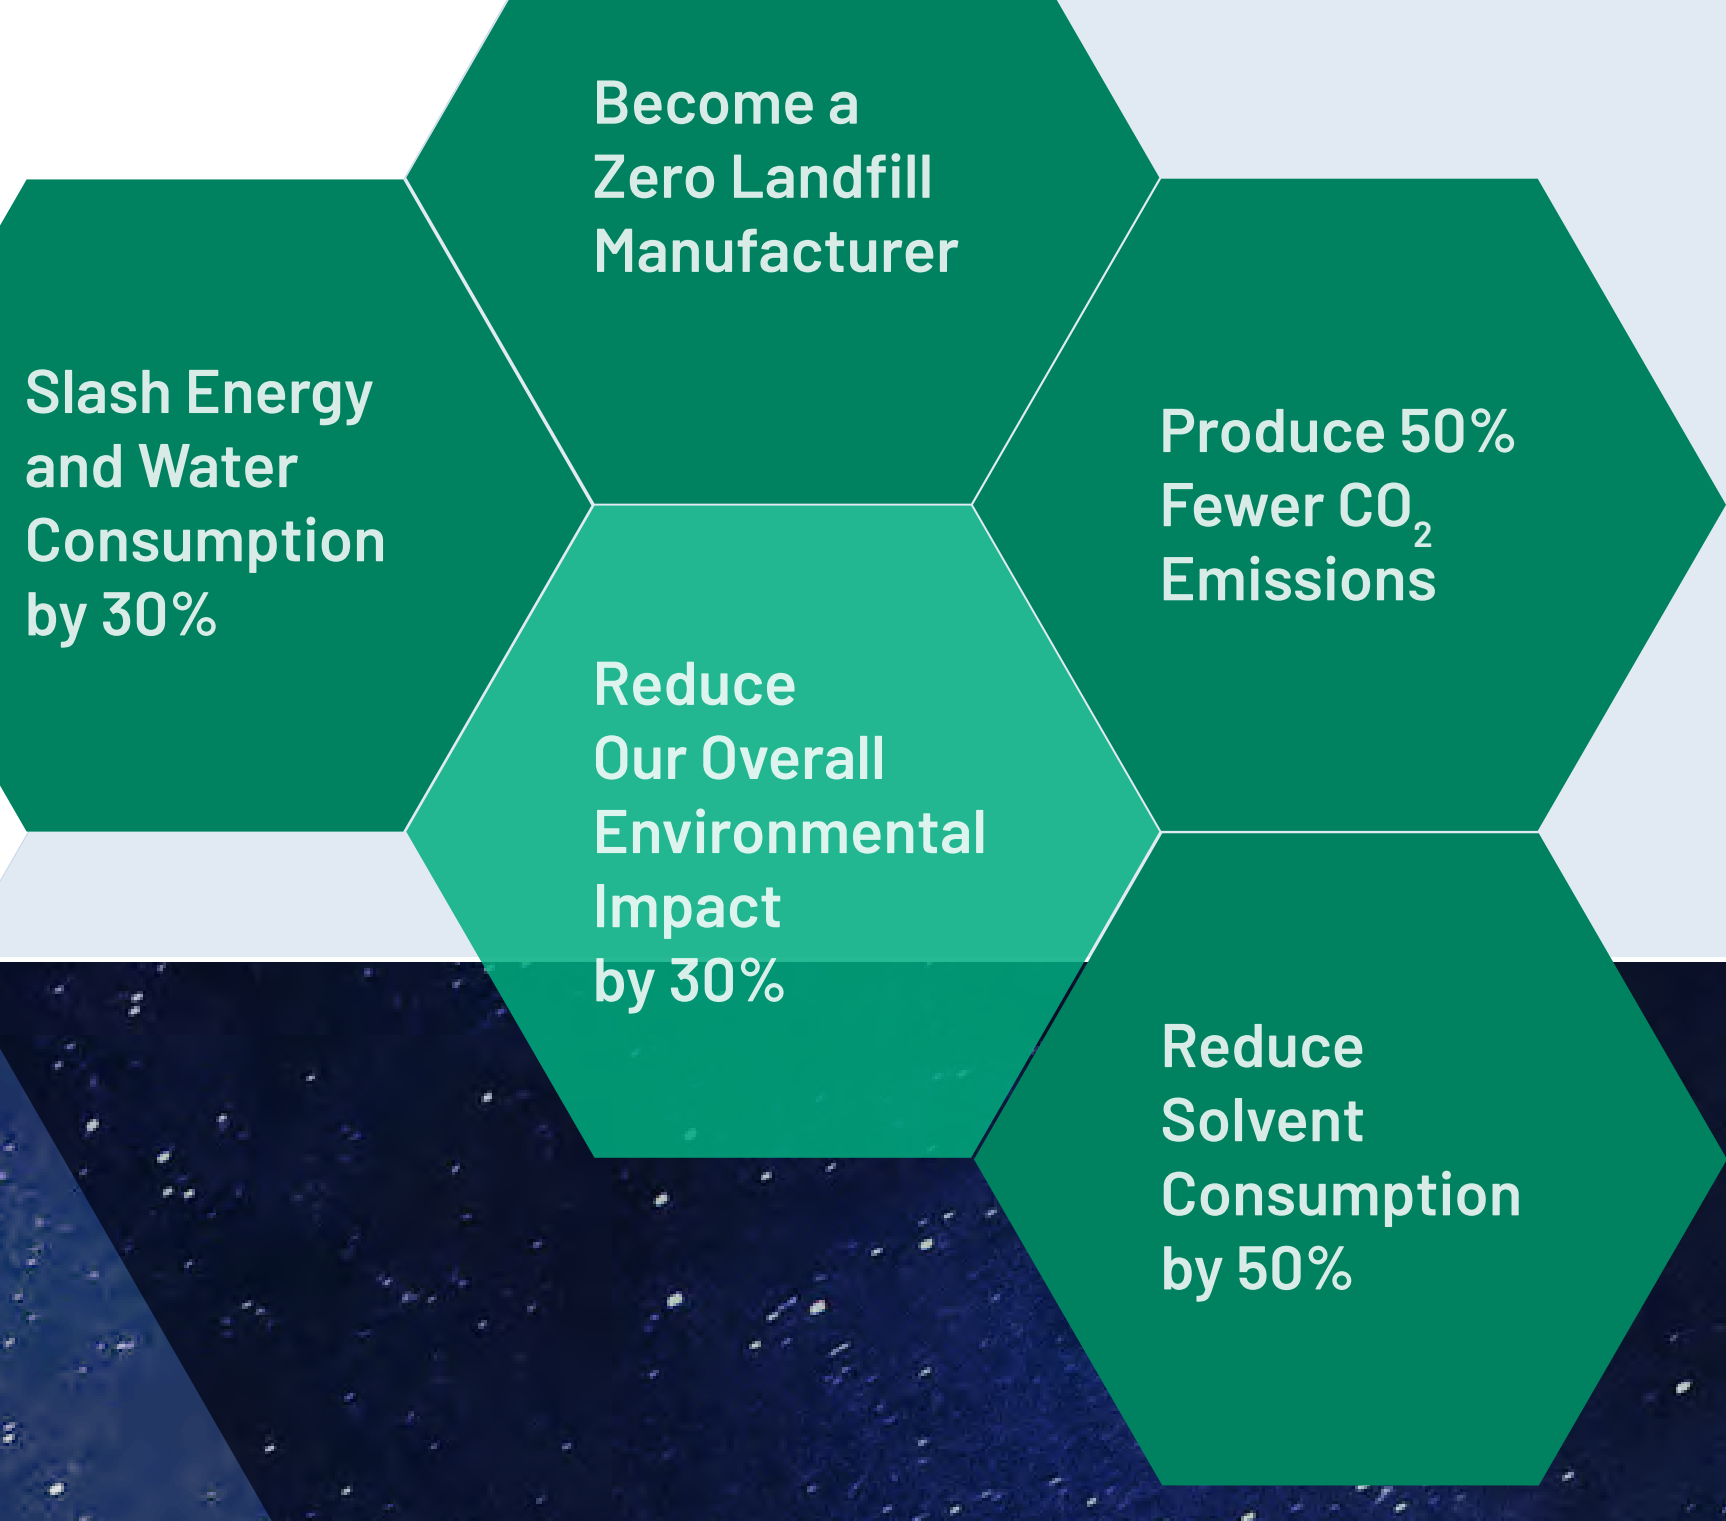

## Rethink

Sometimes the most planet-friendly action is to avoid problems altogether. Rather than find ways to process and dispose of hazardous waste materials, **our engineers innovate solutions to avoid using these substances.**

OUR VISION:  
**By 2030**  
Produce 50%  
Fewer CO<sub>2</sub>  
Emissions

## By 2030

We're making progress toward these ambitious goals every day by pushing sustainable initiatives while maintaining quality.

## It's Amazing to Think What We're Capable Of
